

# Research on Digestive Diseases

We want to look deeper into our study on the digestive system. I have given the students a doctor's note marked with a digestive disease that the student has been diagnosed with (They really can pick their own disease!). They are to find out 3 things: What is the disease?, Where is it located?, and how do I fix it? The student can do research from the internet, family health books, and encyclopedias. They cannot copy but must put the research in their own words. A bibliography recording their sources is a MUST! The research has to be 3 paragraphs, and have at least 5 sentences per paragraph (1 paragraph per ?)! The research that they find will be shared with the class. I prefer typed information and this assignment needs to be submitted on Dropbox (Sycamore) or attached and emailed to Mr. Neal! This project is worth 80 points!

Due Date: Monday, October 13
